

Delhi Public School Megacity, Kolkata

Class 5 Session 2026-27

Subject: Mathematics

Topic: Multiplication and Division

Please note that all assignments will be completed in the presence of the subject teacher during class hours. Students are not allowed to copy these assignments into their exercise books in advance. In case of absence, students may refer to the assignments to ensure that their work is up to date.

We can multiply 4 by 5 as **repeated addition** is multiplication.

$$4 + 4 + 4 + 4 + 4 = 5 \text{ times } 4 = 5 \times 4 = 20$$

The terms related to multiplication like “product” and “times”. It is shown by the sign “x”.(to be copied)

$$187 \times 3 = 561$$

187 is **multiplicand**, 3 is **multiplier** and 561 is **product**

Multiplicand x Multiplier = Product

MULTIPLICATION PROPERTIES: (to be copied)

1) The product of a number and 1 is the number itself.

Example: $75,457 \times 1 = 75,457$

$$4,568 \times 1 = 4,568$$

2)The product of a number and 0 is zero.

Example: $54,651 \times 0 = 0$

$$8,974 \times 0 = 0$$

3)The product of two numbers does not change, when the order of numbers is changed.

Example: $13 \times 5 = 5 \times 13$

$$173 \times 225 = 225 \times 173$$

4) When a number is multiplied by 10,100, and 1000 simply add the number of zeros to the right to get the result.

Example: i) $1325 \times 10 = 13250$

ii) $298 \times 100 = 29800$

iii) $26 \times 1000 = 26000$

iv) 41×20

$$= 41 \times 2 \times 10 \text{ (First multiply } 41 \times 2)$$

$$= 82 \times 10$$

$$= 820 \text{ (add the zero)}$$

Class work: Fill in the blanks.

1) $12,789 \times \underline{\hspace{2cm}} = 12,789$

2) $132 \times 18 = 18 \times \underline{\hspace{2cm}}$

3) $7,912 \times 0 = \underline{\hspace{2cm}}$

4) $41 \times 30 = \underline{\hspace{2cm}}$

5) $336 \times 100 =$ _____

Practice work

Ex. 3.4 No. 1,2 and 3 of page 58 will be done in the text book.

Day 2:

Multiplication of 4-digit number by 1 digit number, (with carrying)

Example: 1 (To be copied in the exercise book)

Find the product of 7234 and 4

TTh	Th	H	T	0
		1	1	
	7	2	3	4
			x	4
2	8	9	3	6

The product is 28,936 or Ans: 28,936

Multiplication of 5-digit number by 1 digit number, (with carrying)

Example: 2 (To be copied in the exercise book)

Multiply 12322 by 7

TTh	Th	H	T	0
1	2	1	1	
1	2	3	2	2
			X	7
8	6	2	5	4

Ans= 86254

Class work : New Guided Mathematics Ex 3.1, 1h,2 g

A) Multiply the following.

1h) 6315×6 2g) 17850×5

Practice work: Ex 3.1 pg 52 (to be done in the textbook.)

1) b,d,e,g

2) a,c,d,k,l

Day 3:

Distributive property of multiplication

3- digit number by 2-digit number

Multiply 468×53

We will distribute 53.

We will expand the multiplier as $53 = 50 + 3$.

We will multiply $(468 \times 3) + (468 \times 50)$

$= 1404 + 23,400$

=24,804

The teacher will teach multiplication **of 2- digit number by 2-digit number.**

Example 1 (to be copied)

$$\begin{aligned} 68 \times 36 &= 68 \times (30 + 6) \\ &= (68 \times 6) + (68 \times 30) \\ &= 408 + 2040 \\ &= 2448 \end{aligned}$$

TTh	Th	H	T	O
			6	8
		X	3	6
		4	0	8
	2	0	4	0
	2	4	4	8

Product = 2448

Example 1 Multiply 389 by 35 (to be copied)

TTh	Th	H	T	O
		1	1	
		3	8	9
		X	3	5
	1	9	4	5
2	1	6	7	0
1	3	6	1	5

Product = 13615

Class work: The following sums will be **done in the exercise book.**

A) Ex 3.2 pg 54 1d, f.

1) Multiply the following

d) 197×17 f) 237×24

PW Ex 3.2 pg 54 1a, e, g, h in the text book.

Day 4:

Lattice method of multiplication

Class work Written work: Multiply using lattice method.

1) 45×68 2) 923×37

Day 5:

Multiplying money.

Example 1 (to be copied)

Multiply ₹29.50 by 9

₹			P	
	8	4		
	2	9	5	0
			x	9
2	6	5	5	0

Ans) ₹ 265.50

Example 2 (to be copied)

Multiply ₹48.09 x 13

₹				P	
		4	8	0	9
		X		1	3
	1	4	4	2	7
	4	8	0	9	0
	6	2	5	1	7

Ans) ₹ 625.17

Class work: Ex 3.5 no. 2a,c ,pg 59 of the textbook .(in the exercise book.)

2). Multiply.

1) ₹ 4.32 x 2 2) ₹ 123.72 x 4

Practice work

Ex. 3.5 No. 1 on page 59 will be **done in the text book**

Day 6:

Estimation of product of 2-digit numbers.

2-digit numbers will be estimated (rounded off) to the nearest tens whereas 3-digit number will be estimated (rounded off) to the nearest hundreds.

Round off the 2-digit number to tens and then multiply the results to get the product.

Example1: (to be copied)

Estimate the product of 249 and 73

Solution.

249 rounded to nearest hundreds is 200

73 rounded to nearest tens is 70

∴ Estimated product = 200 x 70 =14000

Example 2 (to be copied)

A shopkeeper puts 48 pencils in a packet. Estimate the number of pencils he will put in 194 boxes.

Solution

No. of pencils= 48 rounded off to 50 (nearest tens)

No. of boxes = 194 rounded off to 200 (nearest hundreds)

∴ Estimated number of pencils = 50 x 200 = 10,000

Ans = Approximately there are 10,000 pencils.

Class work (Written work to be done in the exercise book)

A) Estimate the following products by rounding off each number to the highest place.;

1) 1425×12

B) Nimmi saves ₹ 47 a day. Estimate how much she saves in a year.(365 days)

Day 7:

Application of multiplication to solve real life problems.

Example 1: (to be copied)

In a village, there are 1265 farmers. Each farmer has 29 sheep. How many sheep are there in all?

Solution:

Number of farmers in a village= 1265

Number of sheep each farmer has= 29

∴ Number of sheep in the village = $1265 \times 29 = 36685$

Working

	1	2	6	5
		x	2	9
1	1	3	8	5
2	5	3	0	0
3	6	6	8	5

Ans: There are 36685 sheep in all.

Class work:

The following teacher made sums will be done in the exercise book

1) A shopkeeper has 768 tins of ghee in stock. If each tin contains 18 kg ghee, find the total weight of ghee in stock.

2) A weaving machine makes 4148 m cloth in a week. How much cloth will it make in 48 weeks?

Practice work

Revision exercise, no.6 on pg 63

6) A book has 648 pages. How many pages are there in 53 such books?

Day 8:

Concept of division and properties of division.

Division is the mathematical process of breaking or splitting a number into equal groups. The four main parts of division are dividend, divisor, quotient and remainder.

Example To be copied in the exercise book

$685 \div 6$

		1	1	<u>4</u>	Quotient
Divisor	6	6	8	5	Dividend
	-	6			
		0	8		
			6		
	-		2	<u>5</u>	
			2	4	
				2	Remainder

(to be copied)**Divisor:** The number by which we divide a given number.**Dividend:** The number which is divided.**Quotient:** The number which is obtained on dividing a given number.**Remainder:** The number left after completing the process of division.**Note-** Dividend=Divisor Quotient + Remainder**Properties of division (to be copied by children)****a. When a number is divided 1 the quotient (answer) is the number itself and the remainder is 0.**

Example- $47 \div 1 = 47$

$983 \div 1 = 983$

b. When a number (other than zero) is divided by itself the quotient (answer) is 1.

Example- $2365 \div 2365 = 1$

c. When zero is divided by a number the quotient (answer) is 0.

Example – $0 \div 745 = 0$

Fill in the blanks:-

- If the divisor is 1, the quotient is equal to the _____.
- The ____ is always smaller than the divisor.
- If the dividend is zero, the quotient is also _____.
- $471 \div 471 =$ ____

Practice work

Ex. 4.1 on page 68 1 to be done in the text book)

DAY 9:**Division of 4-digit by 1-digit number with remainder****(copy the examples.)****Example 1:** Divide $5273 \div 8$

	0	6	5	9
8	5	2	7	3
	- 4	8		
	0	4	7	
		- 4	0	
			7	3
			7	2
				1

Quotient =659

Remainder= 1

4-digit number by 2-digit number with remainder.

Example 2: Divide 7536 by 14

		5	3	8	
14	7	5	3	6	
	-7	0			
		5	3		
		4	2		
		1	1	6	
		1	1	2	
				4	

Quotient = 538 Remainder=4

Class work: The following sums will be done
in the exercise book.

A) Find the quotient and remainder.

1) $7020 \div 7$ 2) $7684 \div 23$

Practice work: pg 72 Ex 4.2 ,1 ,2 in the text book.(Mass correction to be done.)

DAY 10:

Division by 10 and 100 . Even and odd numbers.

1. If the divisor is 10, (number with which we divide) the last digit (right most) of the dividend is the remainder and the number formed by the remaining digits is the quotient.

$1667 \div 10 = \text{Quotient} = 166, \text{Remainder} = 7$

2. If the divisor is 100, the number formed by the last two digits of the dividend is the remainder and the number formed by the remaining digits of the dividend is the quotient.

2791 ÷ 100 = Quotient = 27, Remainder = 91

Teacher will explain even and odd numbers. (To be copied)

1) A number with digits 0,2,4,6,8 at its ones place is an even number. It is divisible by 2.
746 is divisible by 2 so it is an even number.

Example $746 \div 2$

	3	7	3
2	7	4	6
-	6	↓	↓
	1	4	↓
-	1	4	↓
	0	0	6
	-		6
		0	0

No remainder

2) A number with digits 1,3,5,7,9 at its ones place is an odd number. It is not divisible by 2. It always has a remainder.

Example; $263 \div 2$

	2	3	1
2	2	6	3
-	2	↓	↓
	0	6	↓
-		6	↓
		0	3
		-	2
			1

It has a remainder.

Practice work

Ex 4.3 pg 76 nos 2,3 in the text book.

Day 11:

Dividing money

Children will copy.

Example

₹55.20 ÷ 4

	1	3	.8	0	
4	5	5	.2	0	
-	4	↓			
	1	5			
+	1	2	↓		
	0	3	2		
	-	3	2	↓	
			0	0	
				0	
				0	

Thus, ₹ 55.20 ÷ 4 = ₹13.80

Class work: Ex.4.4 No. 2 a,b and g on page 77 will be **done in the exercise book.**

1. Divide the following amounts.

a) ₹70.50 ÷ 5 b) ₹84.60 ÷ 3 g) ₹512.14 ÷ 2

Practice work

Ex 4.4 pg 77 no 1 (all the sums) in the text book

DAY 12:

Unitary Method

Children will copy in their exercise book.

- i) To find out the value of **many** when we know the value of **one**. Then we **multiply**.
- ii) To find out the value of **one** when we know the value of **many**. Then, we **divide**.

Example 1

A company paid ₹86,886 as airfare for 18 tickets to travel from New Delhi to Chennai. What was the fare of one ticket?

a) one ticket

b) 9 tickets

Solution:

Cost of 18 tickets = ₹86,886

a) ∴ Cost of 1 ticket = ₹86,886 ÷ 18 = ₹4827 (For the cost of 1 ticket ,we divide)

Working

		4	8	2	7
18	8	6	8	8	6
—	7	2			
	1	4	8		
-	1	4	4		
			4	8	
		-	3	6	
			1	2	6
			1	2	6
			0	0	0

b) $\therefore$ Cost of 9 tickets = ₹4827 x 9 = ₹43443

Working

TTh	Th	H	T	O
	7	2	6	
	4	8	2	7
		x		9
4	3	4	4	3

Ans= The cost of one ticket is ₹4,827 and the cost of 9 tickets is ₹43,443

Class work: To be done in the exercise book

The following sums will be done.

Solve.Ex 4.5 pg 79 e,h (Understanding, Analysing and Evaluating)

- a) How many pencils would be there in a packet if there are 108 pencils in 6 packets?
b) A weaving mill produces 448 sarees in 8 days. How many sarees will be produced in 15 days?

Practice work:

Pg 83 Revision Exercise no.10

DAY 13:

Recapitulation of Unitary Method .

Teacher made sums.

- 1) 21 trucks can carry 5025 kg of rice. How much rice can be carried in 16 trucks?
- 2) The price of 17 books is ₹2116. Find the price of 69 books?
- 3) Reena bought 6 eggs for ₹37.50 and Tina bought 5 eggs for ₹33.75. Who got a better deal?

DAY 14:

Worksheet
