

Delhi Public School Megacity, Kolkata

Class 4 Session 2026-27

Subject: Science

Topic: Push And Pull

Please note that all assignments will be completed in the presence of the subject teacher during class hours. Students are not allowed to copy these assignments into their exercise books in advance. In case of absence, students may refer to the assignments to ensure that their work is up to date.

Answer the following questions:

1. What is force? Give an example of situation in which you push or pull to change the state of motion of an object.

Ans: Force is push or pull that changes or tends to change the state of rest or uniform motion of an object or changes the direction or shape of an object. Goalkeeper dives or jumps up to apply a force on a moving ball due to which he can stop or deflect the ball saving a goal being scored.

2. What are the characteristics of force?

Ans: The characteristics of force are:

- to make a stationary object move.
- to make a moving object move faster, slow down or stop.
- to change the direction of a moving object.
- to change the shape of an object.

3. Neha wants to close an open drawer. She accidentally pulls it instead of pushing. What will happen to the drawer? What does it tell about the direction of force?

Ans. Neha wanted to close the drawer but instead of pushing she ended up pulling it. Here the force applied is in opposite direction as required. So the drawer opens up more. This tells us that although push and pull are termed as force, they produce different results.

4. Rohan and Meera were helping their teacher arrange the classroom. He tried to move a table by pushing it but it was too heavy to move, so Meera came and pulled the table from other side while he pushes.

What did Rohan do to move the table? How did Meera help Rohan?

Ans. Rohan tried to push the table but it was too heavy to move. Meera pulled the table from the other side.

Now the table moved easily when it was both pushed and pulled together.

5. **Riya accidentally dropped some iron pins on the floor. Her teacher used a magnet to collect them quickly. Give reason.**

Ans. Riya's teacher used a magnet to collect the iron pins because iron is a magnetic material that are attracted by a magnet.

6. **When Riya throws a ball straight up in the air, it goes up for some time and then comes back down to the ground. Why does the ball fall back?**

Ans. The ball falls back because earth's gravitational force pulls it towards the ground.

7. **Ravi tried to slide his school bag across a rough floor and it moved slowly. When he pushed it on a smooth tiled floor, it moved faster. Why did this happen?**

Ans. This happened because rough surfaces creates more friction, which slows down the movement. So the school bag moved slowly. However, smooth surfaces have less friction, so the bag moved faster.

8. **Draw a diagram showing friction opposes the movement of any object..**
