

Delhi Public School Megacity, Kolkata

Class 4 Session 2026-27

Subject: Science

Topic: Human Body: Food We Eat

Please note that all assignments will be completed in the presence of the subject teacher during class hours. Students are not allowed to copy these assignments into their exercise books in advance. In case of absence, students may refer to the assignments to ensure that their work is up to date.

Answer the following questions:

1. Ravi is a 10-year-old boy. He eats only rice and sweets every day.

- i) From above diet which nutrient is he getting a lot?**
- ii) Is there a problem with this diet? Explain what and why?**
- iii) What problems could he face because of this diet?**

Ans: .i)Ravi eats only rice and sweets every day. He gets a lot of carbohydrates and fats(energy-giving nutrient).

ii) He is missing other important nutrients needed for proper growth, like proteins, vitamins, and minerals. His diet should be balanced and age-appropriate.

iii) Problems he could face include weak muscles, susceptibility to illness, poor growth, and fatigue. He would face diseases due to malnutrition.

2. People should eat seasonal fruits and vegetables. Give reason.

Ans: Seasonal fruits and vegetables are fresher, healthier, and contain the right amount of nutrients for that particular season. This would protect us from seasonal diseases and boost our immunity.

3. Priya feels very tired and weak after playing in the park, even though she ate a proper diet. Suggest two food items she should include in her to get quick energy. Give a reason for your choice.

Ans. . Priya should include the following two food items to get quick energy:

a. Banana

Reason: Bananas contain natural sugars like glucose, which are easily digested and provide instant energy. It also helps reduce tiredness.

b. Bread / Toast with Peanut butter

Reason: Bread is rich in carbohydrates, it provides quick energy. Peanut butter is an energy-giving and body-building food, making it a good choice for breakfast or snacks.

4. Why can a person survive longer without food than without water? Explain using the functions of nutrients.

Ans. Food provides nutrients like carbohydrates, fats, proteins, vitamins, and minerals. Carbohydrates and fats give energy. The body can store them and use these stored nutrients for some time. Proteins help in growth and repair, but the body does not need them immediately for survival.

Water, on the other hand, is needed all the time.

- It helps in the digestion of food
- Transport of nutrients and oxygen in the blood
- Removal of wastes through urine and sweat
- Regulation of body temperature

5. Meena eats rice, vegetables, dal, fruits, milk, and eggs daily. Is her diet balanced? Name the nutrients she is getting from these foods.

Ans. Yes, Meena's diet is a balanced diet because it includes foods from all major food groups.

She gets:

Rice – Provides carbohydrates (energy-giving nutrient)

Dal – Provides proteins (body-building nutrient)

Vegetables and fruits – Provide vitamins and minerals (protective nutrients)

Milk – Provides proteins and calcium (for strong bones and growth)

Eggs – Provide proteins and fats (growth and energy)

Since her diet provides energy, growth, and protection, it is called a balanced diet.

6. Imagine you live in a hot village with no fridge. Your mother has lots of mangoes from the tree. Suggest two different ways to preserve them for many months so you can eat them later. Explain why each way stops the food from spoiling.

Ans. a. Drying -Making Dried Mango / Aam Papad

Reason: When mango slices are dried in the sun, most of the water is removed.

Why it stops spoiling: Germs need water to grow. Without water, germs cannot grow, so the mangoes do not spoil.

b. Pickling -Making Mango Pickle

Reason: Mango pieces are mixed with salt and oil.

Why it stops spoiling: Salt and oil stop germs from growing and keep air and moisture away, so the mangoes stay safe for a long time.

7. “Saving food today means saving the future.” Give a reason.

Ans. “Saving food today means saving the future” because food is made using many valuable resources like farmers' hard work, water, soil, energy, and time. When we waste food, all these resources are wasted. Saving food helps feed more people, reduces hunger, protects the environment, and ensures enough food for future generations.

8. Design a poster on “Say No to Food Wastage”. Prepare a healthy eating pledge for your class.

To be done by students
