WORKSHEET

CLASS IV

SCIENCE

TOPIC: PUSH AND PULL

Name: _____ Class: _____ Sec: _____ Date: _____

Section A : Name the following.

1. Any push or pull that acts on an object. _____
2. The force that is applied by muscles to do work. _____
3. The force of attraction between a magnet and certain types of materials. _____
4. The force that opposes movement between two surfaces. _____

Section B : Match the following

Column A	Column B
a) Frictional force	1) Earth attracts all the objects
b) Muscular force	2) attracts iron
c) Gravitational force	3) opposing movement
d) Magnetic force	4) pulling a cart

Section C : Choose the correct answer

1. Every movement that you see around you is because of either
a) Push b) Pull c) Both a and b d) None of them .
2. Any push or pull that acts on an object is called a _____
a) Force b) Motion c) Energy d) Speed .
2. A force can _____
a) Change the shape of an object b) Stop a moving object
c) Start a stationary object d) All of these.
4. When we open a drawer, we usually _____
a) Push it b) Pull it c) Lift it d) Drop it ..

Section D : Read each statement carefully and write True or False

1. In a game of tug-of-war, one team pulls while the other pushes.
2. A bull pulls the cart with the help of its muscular force.
3. A magnet attracts both magnetic as well as non magnetic objects .
4. When a body is thrown up, it comes down due to gravitational force.

Section E : Answer the following

1. A boy tries to push a car but it does not move. Is force applied? Explain your answer.

- 2.Can force be applied without touching the object? Give an example and explain.

3. Suppose you and your friend are pulling a rope in a tug of war. What happens if both apply equal force and what happens if one applies greater force?

- 4.Why do we lean forward when pushing a car? Explain in term of force.
