

Delhi Public School Megacity, Kolkata

Class 4 Session 2026-27

Subject: Computer Science

Topic: Storage and Memory Devices

Please note that all assignments will be completed in the presence of the subject teacher during class hours. Students are not allowed to copy these assignments into their exercise books in advance. In case of absence, students may refer to the assignments to ensure that their work is up to date.

EXERCISES

A. Fill in the blanks with the correct words.

Internal ROM Information Bytes Bits

1. A computer language represented in **bits** is known as binary language.
2. **Information** is the output given by the computer.
3. 1 KB = 1024 **bytes**.
4. Primary memory is also called **internal** memory.
5. **ROM** is a non-volatile memory.

B. Write T for the true statement and F for the false one.

- | | |
|---|--------------|
| 1. One byte is equal to 12 bits. | False |
| 2. A hard disk is made up of a collection of discs known as platters. | True |
| 3. You can only read instructions from RAM. | False |
| 4. A CD can store up to 700 MB of data. | True |
| 5. A DVD is square in shape. | False |

C. Choose the correct option.

1. Memory enables the computer to store _____.
a. Data b. Instructions c. Information d. **All of these**
2. A computer works with which of the following digit(s)?

- a. 0 b. 1 c. **Both (a) and (b)** d. None of these
3. Which of the following is a volatile memory?
- a. ROM b. **RAM** c. Both (a) and (b) d. None of these
4. A Blu-ray disc looks similar to a_____.
- a. CD b. DVD c. **Both (a) and (b)** d. None of these
5. Which of these is usually the smallest in storage capacity?
- a. **CD** b. DVD c. Pen drive d. Blu-ray disc
6. 1024 KB is equal to
- a. 1 GB b. 1 TB c. **1 MB** d. None of these

D. Answer the following.

1. What is the difference between data and information?

Ans: Data are facts, figures, or words that we give (input) to the computer and want the computer to work on.

Information is the result (output) produced by the computer after it has carried out the given instruction.

2. What is a byte?

Ans: Byte is a memory unit. One byte is equal to 8 bits.

3. 1 TB is equal to how many GB?

Ans: 1 TB = 1024 GB.

4. Why RAM is called a volatile memory?

Ans: RAM is called a volatile memory because as soon as the power to the computer is switched off, the stored data and instructions disappear from RAM.

5. What are the different types of ROM?

Ans: The different types of ROM are: PROM, EPROM, and EEPROM.
